

Product News**Product Group > Sensors & Transmitters****Product SubGroup > Sensors, Others****Viscosity Sensor
with USB connectivity**

The ViSmart viscosity sensor with standard USB connectivity allows the user to connect the sensor to any computer platform and immediately start acquiring viscosity and temperature data. The sensor was designed for challenging embedded applications. Measuring 3.3x2.8x1.0cm and weighing 113.40g the sensor is sealed for complete immersion. The solid-state sensor does not have any moving part, is unaffected by vibration or flow conditions and does not need field calibration. It integrates to the eCup handheld reader or the ViscNet control hub to provide a continuous audit trail for process monitoring markets.
